

# Infor ERP<sup>SL</sup> (SyteLine) manufacturing

 Industry-specific solutions—built for manufacturers by manufacturers.

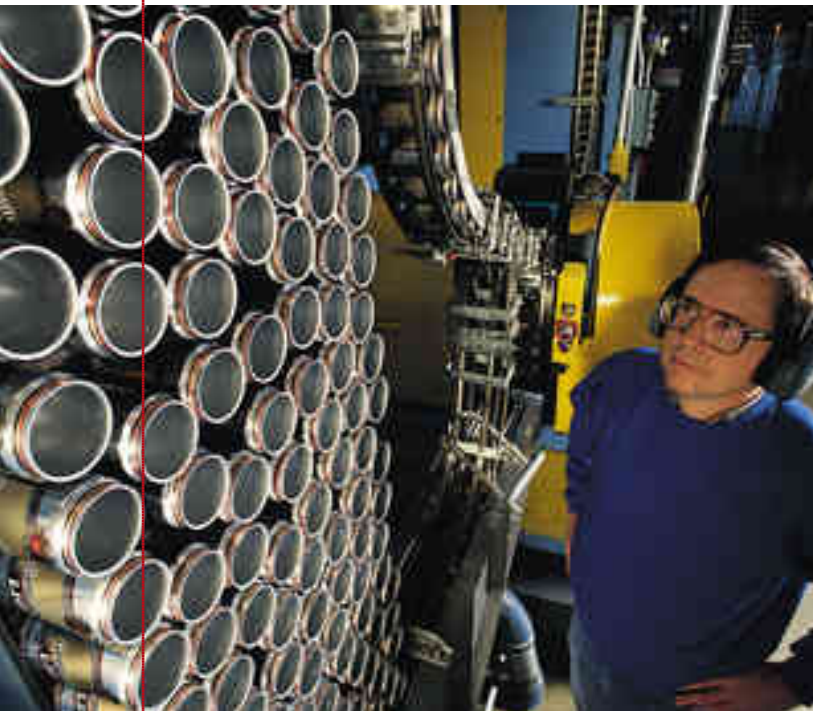

## Be enterprising.

Effective supply chain synchronization is vital to stay competitive and meet customer requirements, but at the end of the day the true measure of success is how well your manufacturing plants perform. Within those four walls, you can't afford anything less than optimum flexibility and agility, with systems that support the smooth flow of information and materials through all your operations. Lean manufacturing is the key to efficiency, supporting mixed modes of production to help you be as responsive to changing customer demand as you need to be. The manufacturing capabilities of Infor<sup>™</sup> ERP SL (formerly SyteLine) make it possible.

## Leverage experience.

At Infor, our manufacturing professionals—many with more than 25 years of experience—are helping companies like yours solve their toughest business challenges. That experience is built into Infor ERP SL, a powerful solution that brings a new level of performance to manufacturing operations, enabling you to:

- Maintain multiple production environments simultaneously.
- Effectively plan capacity and material available for each of your manufacturing sites.
- Keep inventory low while avoiding shortages.
- Reduce the cost of goods sold.

## Get business specific.

With Infor ERP SL, you can rely on a solution that is built, serviced, and managed by manufacturing professionals who understand your production requirements—above all, the need for processes to flow smoothly, without obstacles or hold-ups. With our focus on helping you achieve your lean manufacturing and quality goals, Infor ERP SL provides ongoing value to your organization.

- *Mixed-mode manufacturing*—From repetitive to engineer to order to make to order to the hybrid environment, Infor ERP SL enables the processes you need to accelerate production and meet customer demand more quickly. Our solution lets you switch back and forth among work orders, production schedules, and Just In Time (JIT)/KANBAN—a mix-and-match approach that can be done at the item level. For example, you may decide to use production schedules as the method for the final assembly of an item, but JIT/KANBAN for subassemblies. Infor ERP SL gives you this flexibility.
- *Advanced Planning and Scheduling (APS)*—With support for Materials Requirements Planning and Master Production Scheduling, our APS engine synchronizes material and capacity with customer orders. You turn customer orders into reliable bills of material and routings, ensure changes from customers and engineers get incorporated in a timely manner, and manage capacity to meet anticipated demand.
- *Materials and inventory management*—With network-wide views of inventory, our solution offers inventory control across multiple sites and warehouses, with tracking and time-phasing of items needed for each production request, as well as mechanisms to arrange transfers of material among sites. Purchasing and Electronic Data Interchange are supported.
- *Quality control*—Three integrated modules (QCS Supplier, QCS in-Process, and QCS Customer) help you execute your quality control system effectively and efficiently. Infor ERP SL lets you execute the day-to-day procedures associated with receiving, manufacturing, and shipping, ensuring you meet key quality requirements every step of the way. Tools are included for managing non-conformance, taking corrective action, and measuring quality costs.

## See results now.

Built on the widely deployed Microsoft® .NET technology platform, Infor ERP SL solutions feature an advanced software architecture that is reliable, scalable, and easy to implement and manage. Built for manufacturers by manufacturers, they are designed to integrate smoothly with your existing environment, while providing the flexibility to adapt to changing business needs over time. From the very first day, you'll save time and money with Infor ERP SL, a solution with everything you need to be the lean, agile manufacturing organization you want to be.
